Juniper Mist

Enterprise functionality with no hidden fees

Juniper Mist built the first AI-Native wired and wireless platform, designed specifically for the Smart Device Era. With the Juniper Mist Platform, you can think centrally and act locally through a combination of cloud-based intelligence and enterprise-grade Access Points. Revolutionary machine learning technology simplifies Wi-Fi operations and delivers personalized indoor location services.

Benefits of Juniper Mist

Network Automation

Automates deployment, troubleshooting, and root cause analysis

Predictable Network Services

Provides reliable and secure network services tailored to individual needs

Faster MTTR

Proactively captures packets at the time of an incident to diagnose intermittent issues
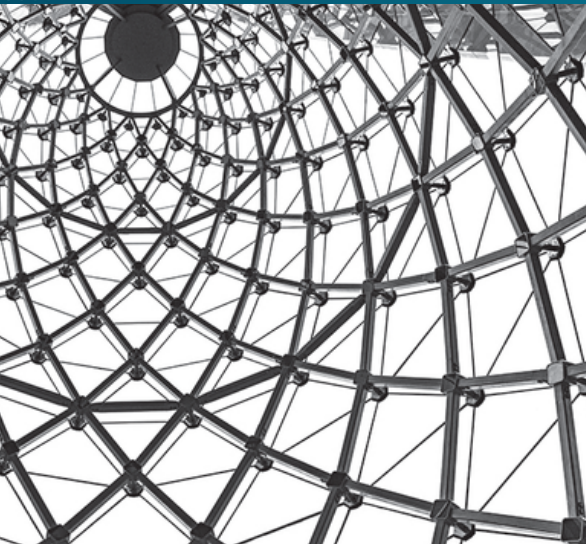

Simplified Network

Simplifies network operations from design & deployment to troubleshooting maintenance

End-to-End Visibility

Provides end-to-end visibility, insights, and full operational control of networks

Juniper Mist is **a wireless network that uses artificial intelligence (AI) to improve IT operations.** It combines a micro services cloud architecture with an AI engine called Mist AI.

Features of Mist AI include:
- WLAN access points with integrated BLE support
- Customized cloud services
- Simplified onboarding
- Flexible deployment
- Automated enforcement of wired and wireless SLEs
- Marvis Virtual Network Assistant
