

PROJECTORS

Versatile Solutions for Every Application

For nearly a quarter century, Optoma's award-winning digital projectors have been lighting up classrooms, conference rooms and auditoriums around the world. With a variety of options for resolution, throw distance, brightness, installation type and connectivity, there's always an Optoma projector ready to help your content look its best.

Laser Power

Optoma projectors' innovative DuraCore laser light source with advanced laser diode cooling technology and dust-resistant design facilitates industry-leading long lifetime, typically delivering 30,000 hours of use, with no lamps or bulbs to replace.

Bright in the Light

With models featuring as much as 22,000 lumens and advanced light sensing technology, Optoma projectors ensure content brightly shines through, even in venues like the cafeteria with high ambient light from windows or always-on lights.

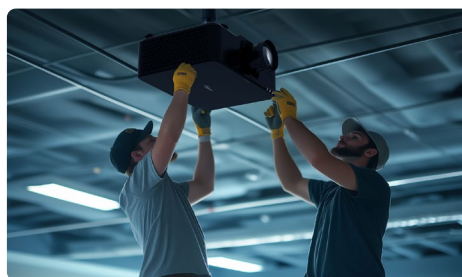

Viva la Resolution

Fine-detail, lifelike content should look just as its creators intended. With models featuring a full spectrum of resolution options including 4K UHD and WQUXGA (3840 x 2400) with more than 9.2M displayed pixels, content creators can rest assured knowing their work will look its very best, in any application from timeless art to immersive simulation.

What a Throw!

Learning spaces come in all shapes and sizes; Optoma projector throw distance options do too. From small collaborative rooms in the library that require an ultra-short throw from less than one foot away to concert halls might that require a long throw projector in the tech booth in the back: either way, we've got you.

Worth It

Budgets matter; that's why Optoma projectors, while built to last, feature no-cost warranties that ensure your investment is protected. Plus, with available multi-year extended warranties, it's easy to find additional peace of mind.

Cloud Control

With built-in Optoma Management Suite (OMS®)* support—or with the addition of the Optoma Hyve module—school, district and campus AV/IT administrators can confidently manage an entire fleet of projectors and other visual solutions. Monitor health, diagnose issues and control devices using the intuitive cloud-based** application or a local area network. Remotely schedule digital signage, broadcast content, power on/off and more.

Create together,
learn together!

Classroom

Enjoy captivating visuals illuminated from a sturdy, budget-friendly projector and ensure students and administrators stay engaged without breaking the bank. A lineup with varying resolutions, throw ratios and brightness levels means we have exactly what your learning space needs.

Ultra-Short Throw

For smaller spaces that require big-screen visuals, or rooms where presenters are closer to the screen, our ultra-short throw projectors offer minimal shadows and 100"+ images from as close as a foot away.

Large Venue

In the largest auditoriums, lecture halls and arenas where long throws and elite image performance is critical, professional, fixed installation projectors are a must with models featuring interchangeable lenses and brightness options to suit any ambient light level.

Meeting Room

Natural light from meeting room windows can spur creativity, but ambient light can also make presenting more challenging. With bright Optoma projectors, your colorful, detailed and carefully curated content shines through, even with the blinds open and the lights on.

Ultra-Portable

When mobility is important, a compact, lightweight projector makes all the difference; enabling teachers to easily take visual lessons with them to a different classroom, a collaborative makerspace or even on the road for a field trip.
